## Executive Summary

This presents the salient points of the report and should not be referred to in isolation.

<b>Site Location and Description</b>	The site is located off Station Road, approximately 800m northeast of the centre of Yaxley village; approximately 5.5km south of Peterborough; as shown on the site location plan presented in Appendix I. The site can be located by Ordnance Survey National Grid Reference TL 193 929. The IPPC application site comprises galvanising processes with associated bunded pre-treatment baths, galvanising baths, scrubbers and waste storage.
<b>Geo environmental Setting</b>	<p>The 1:50,000 scale Geological Survey Map 172 Ramsey 'Solid and Drift' identifies the site to be underlain by Glaciolacustrine Deposits which are in turn underlain by soils of the Oxford Clay Formation. The underlying strata has been classified by the EA a non - aquifer.</p> <p>The site does not lie in an area requiring a coal mining report.</p> <p>One air pollution control has been identified on-site connected with the hot dip galvanising processes. No discharge consents or pollution incidents to controlled waters have been recorded within a 250m radius of the site.</p> <p>No recorded abstraction licences have been identified within a 250m radius of the site, although fifty nine have been identified within a 251 – 500m radius of the site all associated with surface waters for spray irrigation or other agricultural use.</p> <p>The site is not located within an indicative Tidal or Fluvial Floodplain designated by the Environment Agency.</p> <p>No registered landfill sits have been identified within a 250m radius of the site.</p> <p>No Radon Protective Measures are required at the site.</p>
<b>History of Land Use</b>	A review of all available desk study information indicates that the eastern / northern-eastern part of the site was occupied by a railway (and associated sidings and station) prior to 1889 up until the early 1970's after which the site is redeveloped to an industrial end use. Further development of the site takes place on subsequent maps; by 1986 the site is generally shown as it is today. Bunded above ground storage tanks (AST) are present in the centre of the site.
<b>Environmental Assessment</b>	Chemical analysis results have been compared with relevant guidance (CLEA and the superseded ICRCL for phytotoxic determinants) which indicate that there are no elevated levels of contaminants present in onsite soils with respect to the continued industrial use.
<b>Statement of Site Conditions</b>	<p>The site's location is not one of high environmental sensitivity. Elevated contamination in the onsite soils was not found and as a result contamination of any groundwater encountered in the future is not anticipated.</p> <p>The intended future use of the site at this time is to continue as an operational galvanising facility. With this in mind, the concentrations on site do not pose a threat to the health of on-site workers.</p> <p>The findings outlined in this Site Report define the baseline of the environmental status of the site. However, the possibility of significant variation in ground conditions existing between sampling locations cannot be discounted and groundwater conditions are based on observations made at the time of the investigation which may be subject to significant variation due to seasonal or other effects.</p> <p>Three permanent monitoring wells were installed around the site to enable future monitoring of the site conditions via the collection of groundwater (if encountered) and / or ground gas.</p>

## **1.0 INTRODUCTION**

### **1.1 Preamble**

Abatech International Ltd. has been appointed by Clarke Drain Ltd to undertake a Contaminated Land Assessment at of the Galvanising Plant which forms part of the site at Clarke Drain Ltd, Station Road, Yaxley, Peterborough.

The investigation and assessment aim to satisfy the requirement for a "Site Report" for Galvanising Plant A2 in the forthcoming Integrated Pollution Prevention and Control (IPPC) permit application.

### **1.2 Report Objectives**

This report provides factual and interpretive environmental information for the Galvanising Plant at the Clarke Drain site, Station Road, Yaxley in relation to the status of the land underlying the site and has been completed with reference to the DEFRA General Guidance Manual on Policy and Procedures for A2 & B Installations.

*Specifically the objectives were:*

- To investigate the historical use of the site and surrounding land,
- To investigate the current processes at the site in terms of their potential to contaminate the land,
- To define a Site Conceptual Model for the site in terms of; sources of contamination, pathways for contaminants and receptors/targets of contamination,
- To assess the existing quality of the soil and groundwater at the site through intrusive investigation,
- To install permanent monitoring wells to allow future monitoring of site conditions.

### **1.4 Sources and Conditions**

The findings and recommendations made in this report are based on published information; a site walkover carried out on 27<sup>th</sup> July 2004 and ground investigation works carried out on 19<sup>th</sup> August 2004. Abatech International Ltd. cannot accept responsibility for the reliability and authenticity of published information or reports

prepared by third parties. The possibility of significant variation in ground conditions existing between sampling locations cannot be discounted. Groundwater conditions are based on observations made at the time of the investigation and may be subject to significant variation due to seasonal or other effects.

### **1.5 Previous Reports**

No previous reports have been made available to Abatech International Limited.

## **2.0 SITE LOCATION AND DESCRIPTION**

### **2.1 Location**

The site is located off Station Road, approximately 800m northeast of the centre of Yaxley village; approximately 5.5km south of Peterborough; as shown on the site location plan presented in Appendix I. The site can be located by Ordnance Survey National Grid Reference TL 193 929.

### **2.2 Description**

The walkover survey was undertaken on the 27<sup>th</sup> July 2004. The following key observations were made:

#### **2.2.1 Site:**

- Access to the site is via Station Road,
- The IPPC application site covers an area of approximately 0.36 ha and comprises galvanising processes with associated bunded pre-treatment baths, galvanising baths, scrubbers and waste storage areas,
- Brick walling forms the majority of the boundaries to the site,
- The galvanising shed comprises a high bay warehouse, brick and clad unit with concrete floor and loading bay areas to the sides. Concrete hardstanding, portakabins and metal storage areas occupy external areas around the site.
- The internal floor around the galvanising baths were noted to be in sound condition.

A site features plan showing the general aspects of the site is included in Appendix II and general site photographs are presented in Appendix III

### 2.2.2 Surrounding Area:

- Other operational areas of the Clarke Steel works are adjacent to the north and south of the Galvanising Plant,
- The site is bordered to the east by railway land with open fields beyond,
- Industrial / commercial properties border the north, south and west of the site including salvage yards with residential properties beyond.

## 2.3 Galvanising Shed

### *Process*

Steel parts are chemically cleaned in a sequence of bunded baths containing hydrochloric acid with surfactants and pickling inhibitors before being immersed in an ammonium chloride flux solution prior to galvanising. The galvanised steel parts are then quenched in water containing weak dichromate which prevents oxidation.

Fumes from the galvanising bath are fed through a wet scrubber before the air is vented to atmosphere and the scrubber waste recycled to the flux tank.

### *Outside*

Outside the galvanising shed is a bunded area of tank waste and acid storage along with a separate area containing water, waste acids and scrubber waste.

### *Major Services and Utility Lines*

Main drainage pipeline runs generally in a north – south direction across the eastern portion of the site. Minor drainage pipelines run across the site east – west and connect into the main pipe.

A gas pipeline runs into the site to the north of the galvanising shed.

Mains electricity cables are above ground within internal areas with short external loops feeding external lighting and security cameras.

Service plans were provided by the site owner and the works manager indicated the locations of the service runs during the site walkover and again prior to commencement of site works. Areas around all intrusive investigation boreholes were scanned prior to commencement with a Cable Avoidance Tool (C.A.T.).

These are shown on the general site photographs presented in Appendix III

### 3.0 GEO-ENVIRONMENTAL SETTING

#### 3.1 Geology Hydrogeology and Mining

A review of the following information has been undertaken:

- British Geological Survey 1:50,000 scale Series, Sheet 172, Ramsey, Solid and Drift Edition.
- Environment Agency Groundwater Vulnerability Map 1:100,000 scale Series, Sheet 24, North Northamptonshire.
- Coal Mining Searches, The Law Society Guidance Notes and Directory, 1998 Edition.
- BR 211 Radon: guidance on protective measures for new dwellings, 1999 Edition.

**Table 3.1 – Geological Information**

Superficial Deposits	The site is indicated to be underlain by Glaciolacustrine Deposits (clay, silt and sand) of <del>Jurassic age</del> <i>middle Pleistocene</i>
Solid Geology	The site is shown to be underlain by the Oxford Clay Formation, consisting of grey mudstones in excess of 60m. <i>of Jurassic period</i>
Discontinuities	There are no recorded discontinuities noted within 1km of the site.
Hydrogeology	The site is underlain by strata classified as a non aquifer. These are formations which are generally regarded as containing insignificant quantities of groundwater. However, groundwater flow through such rocks does take place and needs to be considered in assessing the risk associated with persistent pollutants. Some non-aquifers can yield water in sufficient quantities for domestic use.
Hydrology	The nearest surface water course is the River Nene (old course) located approximately 150m south southeast of the site. EA River Quality C (fairly good).
Mining	The site does not lie in an area requiring a coal mining report. Therefore no coal mining associated precautions should be required at the site.
Radon	The site lies in an area where less than 1% of homes are above the action level. No radon protective measures will be necessary based on the information supplied to Landmark by BGS Information Services Group

### 3.2 Environmental Data Search

The principal considerations of immediate relevance are given below. For a comprehensive list of environmental data, refer to the Envirocheck Report presented in the Appendix IV.

**Table 3.2 Environmental Data**

Air Pollution Controls	There is one air pollution control identified onsite connected with the hot dip galvanising processes. A further air pollution control has been identified within a 250m radius of the site assigned to respraying of road vehicles at Yaxley Coachworks Ltd.
Discharge Consents	No discharge consents have been identified within a 500m radius of the site. Nineteen have been identified within a 501 – 1000m radius of the site.
Integrated Pollution Controls	None have been identified within a 500m radius of the site. One integrated pollution control has been identified within a 501 – 1000m radius of the site operated by London Brick Co Ltd.
Pollution Incidents to Controlled Waters	There are no recorded pollution incidents within a 250m radius of the site. Three have been identified within a 251 – 500m radius of the site relating to oils or unknown pollutants. A further five have been identified within a 501 – 1000m radius of the site.
Substantiated Pollution Incident Register	One entry on the register has been identified within a 250m radius of the site classified as Category 1 – Major Incident of Contaminated Water. One further entry is identified within a 501 – 1000m radius of the site involving Crude Sewage.
Water Abstractions	No licensed groundwater abstractions have been identified within a 250m radius of the site. Fifty nine have been identified within a 251 – 1000m radius of the site all associated with surface water abstractions for spray irrigation or other agricultural uses.
Flooding	The site is not located within an indicative Tidal or Fluvial Floodplain.
Landfill Sites	The nearest registered landfill site, located approximately 496m to the northwest, is indicated to have closed in August 1992, and was authorised to take brick waste. A BGS recorded landfill site is identified approximately 606m south of the site, the details are unknown.
Waste disposal / Treatment sites	No waste disposal / transfer sites have been identified within a 1000m radius of the site.
Contemporary Trade Directory Entries	There are two contemporary trade directory entries listed on-site and a further eighteen have been identified within a 250m radius of the site, covering various trades including galvanising, garage services, spraying and road haulage.
Fuel Station Entries	There is one recorded fuel station entry located within a 250m radius of the site, status 'out of industry'.
Subsidence	The site has been classified as having a 'No risk' hazard rating for compressible ground, ground dissolution and gulls and cambering subsidence; a 'low risk' hazard rating for landslip subsidence and a 'low-moderate risk' hazard rating for swelling clay subsidence.
Shallow Mining	The site is within an area with a 'no hazard' risk rating from shallow mining hazards.
Source Protection Zone	The site is not located within a Source Protection Zone for nearby surface or groundwaters.
Nitrate Vulnerable Zone	The site is within an area that is identified as a Nitrate Vulnerable Zone.

#### 4.0 HISTORY OF SITE AND ENVIRONS

A study of historical Ordnance Survey maps has been undertaken to identify any potentially contaminative former land uses. The main historical features of the site and surrounding area (within a radius of 250m) are summarised in Table 4.1 and Table 4.2 below and are shown on the historical maps presented in Appendix V

**Table 4.1 Principal Historical On-site Features**

OS map date(s)	Source Map Scale	Principal on-site features
1889	1:2,500	Eastern part of the site is occupied by the Great Northern Railway with the remainder shown as part of an open field.
1891	1:10,560	No significant changes identified.
1901	1:2,500	Eastern Part of the site identified as Yaxley & Farcet Station.
1902	1:10,560	No significant changes identified.
1926	1:2,500	Development of the station into central areas of the site.
1927	1:10,560	No significant changes identified.
1938	1:10,560	No significant changes identified.
1958	1:10,560	No significant changes identified.
1966	1:10,560	No significant changes identified.
1974	1:2,500	Railway land is not shown to occupy the site.
1984	1:10,000	Unidentified building is shown to occupy the west of the site, thought to be associated with works to the north.
1986	1:2,500	Building now identified as 'works' with smaller outbuilding identified to the east of the building.
2000	1:10,000	No significant changes identified.

**Table 4.2 Principal Historical Off-site Features**

<b>OS map date(s)</b>	<b>Scale</b>	<b>Principal off-site features</b>	<b>Approximate Distance (m)</b>	<b>Direction</b>
1889	1:2,500	Goods Station Great Northern Railway	Adj Adj	N & NW E
1891	1:10,560	No significant changes identified	-	-
1901	1:2,500	Cattle Pens	50	N
1902	1:10,560	No significant changes identified	-	-
1926	1:2,500	Allotment Gardens Residential dwellings	50 100	NW N & W
1927	1:10,560	No significant changes identified	-	-
1938	1:10,560	No significant changes identified	-	-
1958	1:10,560	Unidentified buildings	Adj & 180	W
1966	1:10,560	No significant changes identified	-	-
1973/74	1:2,500	Allotment gardens, goods station and cattle pens no longer shown. Mushroom Farm Iron and Steel Works Residential development	- Adj & 250 Adj 250	 W & NE N SW
1984	1:10,560	Mushroom Laboratories	250	NE
1986	1:2,500	Mere View Industrial Estate	100	SW
2000	1:10,000	Residential development	150	SW

## 5.0 PHASE I GEOTECHNICAL ASSESSMENT

### 5.1 Ground Conditions

#### *Soils – Made Ground*

It is anticipated that there may be localised deposits of made ground associated with the former railway land on site.

#### *Soils – Natural Strata*

It is anticipated that the natural strata below the site will comprise Glaciolacustrine Deposits of clay, silt and sand (although this shallow deposit may not be present due to previous site use) over the Oxford Clay Formation. This formation is described as grey mudstones weathered to clay near to surface.

#### *Groundwater*

Significant issues relating to groundwater are not anticipated as the underlying strata has been classified as a non-aquifer.

#### *Stability Issues (e.g. mining / slopes)*

The site is not within a coal mining area, therefore no associated stability issues are anticipated.

The Landmark Envirocheck Report for the site indicates that the site has been classified as having a 'No risk' hazard rating for compressible ground, ground dissolution and gulls and cambering subsidence; 'low risk' hazard rating for landslip subsidence and a 'low-moderate risk' hazard rating for swelling clay subsidence.

#### *Contamination and Performance of Building Materials*

No significant issues are expected but this will be confirmed by chemical analysis results.

## 6.0 PHASE I ENVIRONMENTAL ASSESSMENT

### 6.1 Phase I Conceptual Model

The following is based on the desk study information listed above and a site visit undertaken by Abatech International Ltd on the 27<sup>th</sup> July 2004.

#### 6.1.1 Site Summary:

A review of all available desk study information indicates that the eastern / northern-eastern part of the site was occupied by a railway (and associated sidings and station) prior to 1889 up until the early 1970's after which the site is redeveloped to an industrial end use. Further development of the site takes place on subsequent maps; by 1986 the site is generally shown as it is today. Bunded above ground storage tanks (AST) are present in the centre of the site.

#### 6.1.2 S-P-R Characterisation:

The statutory guidance describes contaminated land in terms of 'significant pollutants' and 'pollutant linkages', using SOURCE-PATHWAY-RECEPTOR' scenarios for the site. For a pollutant linkage to exist all three of these elements must be present. These have been clearly defined in the guidance as follows:

*.....potential source as 'a contaminant which is in, or under the land and which has the potential to cause significant harm or to cause pollution of controlled waters'.*

*.....potential pathway as 'one or more routes or means by, or through, which a receptor is being exposed to, or affected by a contaminant, or could be so exposed or affected'.*

*.....potential receptor as 'a living organism, a group of living organisms, an ecological system or a piece of property which is being or could be, harmed by a contaminant or controlled waters which are being, or could be, polluted by a contaminant'.*

Examination of the desk study information and features noted in the site walkover has identified the following:

*Potential Sources:*

The review of the available desk study information has identified the following potential contaminants resulting from former land-use as railway land and other metal plating works which must be considered in a SOURCE-PATHWAY-RECEPTOR scenario. There is also; however; the possibility that naturally occurring levels of some contaminants may exceed the relevant guidance values.

- Heavy metals,
- Asbestos,
- Hydrocarbons,
- Phenols,
- PAH, and
- PCBs.

*Potential Pathways:*

- Direct ingestion of soil,
- Dermal contact with soil,
- Made ground,
- Inhalation,
- Underlying groundwater / vadose zone.

*Potential Receptors:*

- Ground workers employed in the redevelopment of the site,
- Future end users of the site,
- Neighbouring land users (mainly agricultural and industrial),
- The underlying major aquifer and vadose zone.

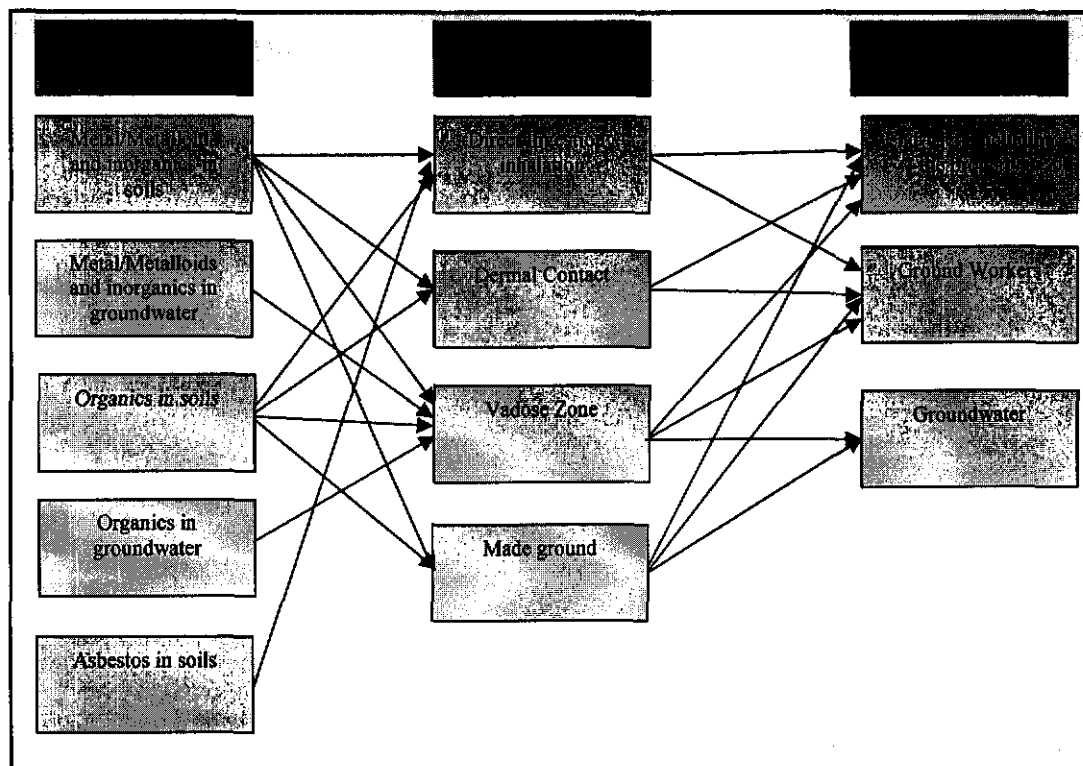

### 6.1.3 Potential Pollutant Linkages:

A potential pollutant linkage is defined as 'the relationship between a contaminant, a pathway and a receptor' where the pollutant is the contaminant in the pollutant linkage. For land to be identified as contaminated under the current UK guidance all three elements of the pollutant linkage must be present. In many cases there may be more than one pollutant linkage on any given site.

A review of the desk study information, the features noted in the site walkover and the potential sources, pathways and receptors listed above has led to the following potential significant pollutant linkages (SPL) being considered (Table 6.1 below):

**Table 6.1 Potential Pollutant Linkages**

#### 6.1.4 Model Status and Uncertainty

The potential significant linkages listed above are based on the available data listed in the sections above and the features noted during the site walkover. Therefore, the linkages identified are tentative and subject to the following uncertainty:

- Actual presence of significant contamination in soils,
- Actual presence of asbestos fibres in soils,
- Actual presence of significant contamination in groundwater.

#### 6.2 Potential Contaminants

A review of available desk study information revealed the potential onsite sources of contamination listed in 6.1.2 above. Reference to the Environment Agency (EA) and the Department for Environment, Food and Rural Affairs (DEFRA) R & D

Publication CLR8: Potential Contaminants for the Assessment of Land and the relevant Department of the Environment Industry Profiles has revealed specific potential contaminants associated with the site or its neighbouring areas former land usages; these are listed in the table below.

**Table 6.2: Potential Sources of Contamination**

<i>Potential On-site Sources</i>	<i>Potential Contaminants</i>	
	<i>Metals and Inorganics</i>	<i>Organics</i>
Railway land	Cd, Cr, Cu, Pb, Ni, V, SO <sub>4</sub> <sup>2-</sup> , Asbestos & pH	PAH, Chlorinated aliphatic hydrocarbons, PCB's
Electroplating and other metal finishing works	Cd, Cr, Cu, Pb, Zn, B, CN, NO <sub>3</sub> <sup>-</sup> , SO <sub>4</sub> <sup>2-</sup> , S <sup>2-</sup> , Asbestos and pH	Phenol, Aromatic hydrocarbons, Chlorinated aliphatic hydrocarbons,
<i>Potential Off-site Sources</i>	<i>Potential Contaminants</i>	
	<i>Metals and Inorganics</i>	<i>Organics</i>
Iron & Steel Works	Cr, Pb, Ni, V, Zn, As, S, CN, SO <sub>4</sub> <sup>2-</sup> , Asbestos and pH	Phenol, Oil/fuel hydrocarbons, Aromatic hydrocarbons, PAHs and PCB's

Tables 2.3 and 2.4 Defra and EA R & D Publication CLR 8 : Potential Contaminants for the Assessment of Land and / or ICRL Guidance Note 42 / 80

## **7.0 RATIONALE FOR PHASE II INVESTIGATION**

### **7.1 Scope of Ground Investigation**

The Phase II Environmental Investigation comprised the recovery of samples from a series of window sampler boreholes, positioned to provide optimum coverage across the site. Samples were selected for analysis on the basis of their onsite visual descriptions with particular attention given to samples showing any olfactory evidence of contamination. All samples were taken in 1 litre snap top plastic containers, any samples suspected of containing any hydrocarbon or volatile compounds were placed in 250ml amber glass jars or vials. All samples were placed in cooled containers and transported to Abatech International's storage facility in Nottingham before awaiting refrigerated transfer to a UKAS accredited laboratory.

The samples were analysed for a range of contaminants in accordance with table 6.2 as follows: arsenic, cadmium, chromium, lead, mercury, copper, nickel, zinc, boron, selenium, total poly-aromatic hydrocarbons (PAH), sulphide, sulphur, phenols, total and free cyanide, pH, sulphate, total organic carbon, volatile and semi-volatile organic compounds, petroleum hydrocarbons, PCBs and asbestos.

The information gained from the Phase I has not highlighted any further potential contaminants.

### **7.2 Scope of Geotechnical Investigation**

A geotechnical investigation was not within the remit of this report.

## 8.0 SITE WORKS

All fieldwork and soil descriptions were carried out in general accordance with BS5930:1999, 'Code of Practice for Site Investigations'. Each of the window sampler boreholes were positioned on site by Abatech International Limited the locations of which are shown on the Site Investigation Plan presented in Appendix VI. Prior to any excavation, each exploratory location was checked for the presence of underground services by reference to available service plans and scanning with a cable avoidance tool (CAT).

### 8.1 Scope of Investigation

Seven window sampler boreholes were advanced across the site to a maximum depth of 5.00m begl. Small disturbed samples were collected from each discrete horizon at each the exploratory location to provide soils for laboratory testing and visual inspection.

No significant visual or olfactory evidence of contamination was noted during the investigation.

**Table 8.1 – Summary of Ground Conditions at the Site**

<b>Description</b>	<b>Maximum Thickness (m)</b>
MADE GROUND comprising concrete cover and associated limestone hardcore	0.40
MADE GROUND comprising dark brown black ashy clinker slightly sandy slightly clayey silt with occasional broken brick.	3.80
Firm light brown orange sandy silty CLAY with occasional flint gravel (Oxford Clay Formation)	4.10

Full Intrusive Investigation Logs are presented in Appendix VII

### 8.2 Limitations to the Investigation

The only limitations to the Phase II investigation were onsite equipment associated with the galvanising works including stockpiled materials on site.

## 9.0 ANALYSIS, RESULTS AND INTERPRETATION

### 9.1 Chemical Analyses of Soils

A total of six representative soil samples from the window sampler boreholes were analysed for the range of contaminants outlined in section 7.1 above. Representative samples of both the made ground and underlying natural strata were analysed. The environmental analysis was scheduled by Abatech International Ltd. and carried out by Alcontrol Geochem Laboratories of Chester. The full details of the test results are presented in Appendix VIII and are summarised in the tables below:

**Table 9.1: Metal analysis on soil samples**

	No. of samples analysed	Concentration range (mg/kg)	CLEA Soil Guideline Values (mg/kg)	No. exceeding threshold
Arsenic	6	7 - 88	500	0
Cadmium	6	1	1400	0
Chromium	6	23 - 718	5000	0
Lead	6	11 - 462	750	0
Mercury	6	1 - 2	480	0
Selenium	6	1	8000	0
Boron	6	1 - 3	3†	0
Copper	6	14 - 709	130†	1
Nickel	6	12 - 139	5000	0
Zinc	6	157 - 985	300†	2

† = ICRL Threshold for any uses where plants are to be grown - now superseded

The metal concentrations recorded, were compared with the Contaminated Land Exposure Assessment Model (CLEA) soil guideline values (SGV) which are considered most appropriate to the proposed commercial / industrial development. Where relevant SGVs are not available; or SNIFFER Assessments are not applicable; the results have been compared to either the interdepartmental Committee on the Redevelopment of Contaminated Land (ICRCL) threshold trigger concentrations (TTC) (recently withdrawn) or the Dutch Intervention Values.

*Zootoxic Metals*

None of the soil samples analysed for zootoxic metals revealed concentrations in excess of the relevant SGV.

*Phytotoxic Metals*

The soil samples analysed for phytotoxic metals revealed copper and zinc concentrations in excess of the comparison guidance value, the exceedances were limited to the made ground.

*Inorganics and Organics*

In lieu of published CLEA soil guidance values for inorganics and organics the results have been compared to the Dutch Intervention Values or recently withdrawn ICRL threshold concentrations, although these values have now been withdrawn they provide a useful guide in the preliminary assessment of soil conditions prior to developing site specific soil guidance values through the CLEA model or SNIFFER. The results of the chemical analyses for organic and inorganic compounds in the soil samples are summarised in table 9.2 (below):

**Table 9.2: Summary of inorganic and organic analysis of soil samples**

	No. of samples analysed	Concentration range (mg/kg)	Intervention/ Threshold Concentration (mg/kg)	No. exceeding threshold
<b>PAH</b>	10	1 – 35.28	40 <sup>++</sup>	0
<b>Benzo(a)pyrene</b>	10	0.01 – 2.70	37.167 <sup>#</sup>	0
<b>Total sulphates</b>	6	536 – 2088	50000 <sup>*</sup>	0
<b>Phenols</b>	6	0.01 – 0.04	5 <sup>°</sup>	0
<b>Phthalates (SVOC)</b>	6	0.60 – 3.11	40 <sup>^</sup>	0
<b>PCBs</b>	6	<0.001	1 <sup>^</sup>	0
<b>Total TPH</b>	6	0.01 – 928	5000 <sup>+</sup>	0

<sup>#</sup> Non validated CLEA SGV (industrial) – derived by Abatech using CLEA software.

<sup>+</sup> Dutch Intervention Value for Mineral Oil.

<sup>++</sup> Dutch Intervention Value for 10 PAHs.

<sup>\*</sup> ICRL action concentration for buildings.

<sup>^</sup> Dutch Intervention Value.

<sup>°</sup> Severn Trent Limited Action Limit for soils, where potable drinking water supplies are to be installed.

*Inorganics*

None of the samples analysed for inorganic compounds recorded concentrations in excess of their guidance values.

The pH values recorded from the soil samples ranged between 7.58 and 8.21 indicating near neutral soil conditions prevail at the site.

*Organics*

In lieu of published CLEA soil guidance values the PAH analysis results have been compared with the Dutch Intervention Value of 40mg/kg which was not exceeded in any of the ten samples analysed. The CLEA 2002 model has been used to create a non validated SGV for benzo(a)pyrene, the worksheets are presented in Appendix IX. The non-validated industrial end use SGV of 37.167mg/kg was not exceeded in any of the ten samples analysed.

**9.2 CLEA Statistical Analysis**

In accordance with CLEA guidance (DEFRA and EA, R&D Publication CLR 7) soil analysis results were subject to statistical analysis to assess soil contamination issues at the site.

Statistical analysis provides more accurate results the greater the data set available, in this case number of samples. The statistics have been designed to review an entire data set, as opposed to comparing individual results to a given SGV. The CLEA statistical methodology produces two key outputs:

- *The Mean Value Test, which calculates the Upper Bound Value (UBV) or 95<sup>th</sup> percentile of the mean. This enables a set of contamination results to be compared to the relevant SGV. If the UBV is less than the SGV, then the mean value test is passed, and the site may be considered not to present a significant possibility of significant harm in the context of Part 2A of the Environmental Protection Act 1990. Conversely, if the test is failed, further sampling, analysis, assessment and possibly remediation may be required.*

- The Maximum Value Test calculates the Outlier Critical Value (OCV). This enables an assessment to be made of whether the highest value in a set of results belongs to the general 'population', or whether it represents a statistical outlier, i.e. a contamination 'hot-spot', not truly representative of the data collected.

The following table summarises the statistical analysis for metals:

**Table 9.3: CLEA statistical analysis of metals**

Determinand	No. of samples analysed	Upper Bound Value (UBV) (mg/kg)	Soil Guideline Value (SGV) (mg/kg)	Is UBV greater than SGV?	Outlier Critical Value	10% Value
Arsenic	6	49.59	500	NO	-	-
Cadmium	6	1.00	1400	NO	-	-
Chromium	6	530.75	5000	NO	-	-
Mercury	6	1.50	480	NO	-	-
Nickel	6	85.38	5000	NO	-	-
Lead	6	288.33	750	NO	-	-
Selenium	6	1.00	8000	NO	-	-

The above statistical analysis indicates that all of the metals analysed have passed the mean value test, because the SGV (or equivalent) was not exceeded by the UBV.

The following table summarises the statistical analysis for both organic and inorganic compounds:

**Table 9.4: CLEA statistical analysis of organic and inorganic compounds**

Determinand	No. of samples analysed	Upper Bound Value (UBV) (mg/kg)	Soil Guideline Value (SGV) (mg/kg)	Is UBV greater than SGV?	Outlier Critical Value	10% Value
Benzo(a)pyrene	10	1.28	37.167 <sup>^</sup>	NO	-	-

<sup>^</sup> Non Validated CLEA SGV – derived by Abatech using CLEA software

The above statistical analysis indicates that organic compounds passed the mean value test, because the SGV (or equivalent) was not exceeded by the UBV.

The CLEA statistical outputs are presented with the laboratory results in Appendix IX.

#### 9.4 Asbestos Testing

A total of six representative soil samples were analysed for the presence of asbestos fibres. None of the samples were found to contain asbestos fibres.

#### 9.5 Groundwater

Groundwater was not encountered during the site investigation works, although water seepages were noted and attributed to surface run-off / percolated waters held within the deep made ground encountered on site.

#### 9.6 Ground Gas Monitoring

Ground gas monitoring has been undertaken on four occasions to monitor ground gas levels on days of differing barometric pressure. Full records are presented in Appendix X.

The following table summarises the ground gas monitoring:

**Table 9.6: Summary of ground gas and groundwater monitoring**

Borehole	CH <sub>4</sub> (% volume)	CO <sub>2</sub> (% volume)	O <sub>2</sub> (% volume)	Flow rate (l/hr)	Depth to water / Depth of well (m)

NR – Not Recorded

0.035 v/v CO<sub>2</sub>

Based on the results of the site monitoring, the gas conditions for the site fall into CIRIA 149, Gas Regime 2. The gas regime identified at the site is considered to represent a moderate risk and therefore the following gas protection measures would be considered necessary.

- Ventilation of confined spaces within building,
- Well - constructed ground slab,
- Low – permeability gas membrane,
- Minimum penetration of ground floor slab by services,

The above measures are taken from CIRIA 149 which details gas protection measures that were in use at the time of publication (1995) and were never meant to be prescriptive guidance. Reference to '*Reliability and risk in gas protection design – Wilson and Card 1999*', confirms the site as Characteristic 1 requiring **no special precautions** with respect to potential risks posed by ground gas migration into the proposed development due to the low measured flowrates, low concentrations of carbon dioxide and zero recorded concentrations of methane.

## 10.0 PHASE II ENVIRONMENTAL ASSESSMENT

### 10.1 Phase II Conceptual Model

#### 10.1.1 Site Summary

The results of the scheduled chemical analysis were compared with the Contaminated Land Exposure Assessment Model (CLEA) soil guideline values (SGV) considered most appropriate to the proposed development. Where appropriate, reference has also been made to the Scotland and Northern Ireland Forum for Environmental Research (SNIFFER). Where SGV's are not available; or SNIFFER inappropriate; the results have been compared to the Interdepartmental Committee on the Redevelopment of Contaminated Land (ICRCL) threshold trigger concentrations (recently superseded). An abridged version of the relevant guidance is presented in Appendix XI.

In light of the chemical analysis results the SOURCE-PATHWAY-RECEPTOR characteristics have been re-assessed as outlined below.

#### 10.1.2 Source-Pathway-Receptor Characterisation and Risk Assessment

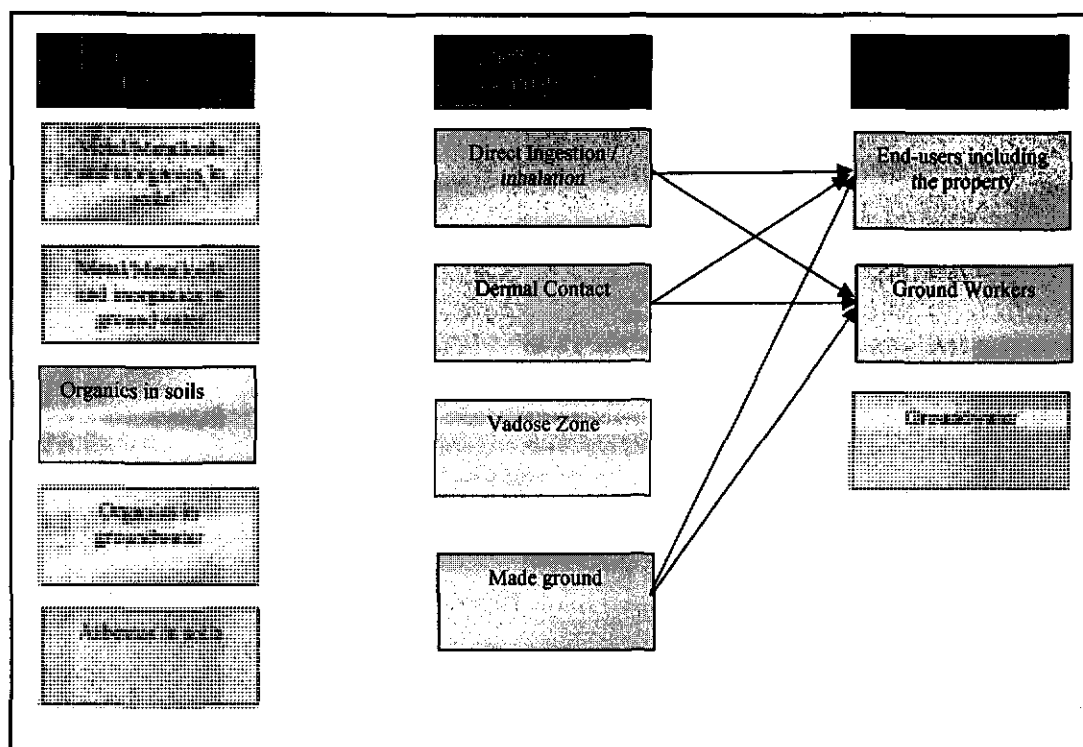

The results of the chemical analysis have indicated that on-site soils do not contain contamination that may act as a source in SOURCE-PATHWAY-RECEPTOR.

The potential pathways and receptors are unchanged from those listed in section 6.1.3 above.

#### 10.1.3 Identified Pollutant Linkages

In view of the identified onsite sources the pollutant linkages have been reassessed as listed in the table below:

Table 10.1 Identified Pollutant Linkages

#### 10.1.4 Model Status, Uncertainty and Justification

The above conceptual model is considered to represent the current site conditions based on the information derived from the site investigation.

### 10.2 Risk Assessment

#### 10.2.1 Qualitative Risk Assessment

Current UK legislation on contaminated land is principally contained in Sections 78 (A) to (YC) in Part IIA of the Environmental Protection Act 1990, which was retrospectively inserted by Section 57 of the Environment Act 1995. This legislation came into effect in April 2000 and is enacted by the Contaminated Land (England) Regulations 2000.

The legislation adopts the principle of a 'suitable for use' approach for the assessment of contaminated land, the rationale reflected in the site-specific risk assessment and determination of remedial strategy. Action is only required if unacceptable risks are posed to human health or to the environment, taking into account the current land-use and geo-environmental setting.

The legislation places a responsibility on the Local Authority to determine whether the land under its jurisdiction is contaminated by consideration of whether: -

- *Significant harm is being caused*
- *There is a significant possibility of significant harm being caused, or*
- *Pollution of controlled waters is being caused or is likely to be caused*

The statutory guidance describes a risk assessment methodology in terms of 'significant pollutants' and 'pollutant linkages', using SOURCE-PATHWAY-RECEPTOR' scenarios for the site.

On the basis of available data, the geo-environmental setting and continued end-use, a qualitative Source-Pathway-Receptor risk assessment table is presented below.

**Table 11.2: Qualitative Risk Assessment Summary Table**

Source	Pathway	Target (Receptor)	Comments	Risk Level	Action
Metals/ Metalloids in soils	Direct ingestion (active) Inhalation (passive) Dermal contact	Ground workers, End users	Zootoxic metal contamination was not identified	LOW	NO FURTHER ACTION IS REQUIRED
Metals/ Metalloids in soils	Near surface soils	Plants within the proposed landscaped areas and gardens.	Phytotoxic contamination was not identified	LOW	NO FURTHER ACTION IS REQUIRED
Metals / Metalloids in water	Direct ingestion (active) Dermal contact	Ground workers, End users	Groundwater was not sampled	LOW	NO FURTHER ACTION REQUIRED AS CONTAMINATION WAS NOT IDENTIFIED
Inorganics in soils	Direct ingestion (active) Inhalation (passive)	Ground workers, End users and the Property	Significant contamination was not identified	LOW	NO FURTHER ACTION IS REQUIRED
Organic compounds in soils	As above (plus dermal contact)	Ground workers, Site users	Significant contamination was not identified.	LOW	NO FURTHER ACTION IS REQUIRED
Organic compounds in waters	As above (plus dermal contact)	Ground workers, Site users	Groundwater was not sampled	LOW	NO FURTHER ACTION REQUIRED AS CONTAMINATION WAS NOT IDENTIFIED
Asbestos	Direct ingestion (active) Inhalation (passive)	Ground workers, End users	Asbestos fibres were not identified	LOW	NO FURTHER ACTION IS REQUIRED

Notes: LOW / MODERATE / HIGH - Risk level is assigned a low/moderate/high qualitative value, based on assessed requirement for action in context of Part II EPA 90.

### **11.1 Site Status**

The Phase II Conceptual Model and the Qualitative Risk Assessment outlined above indicate that the made ground and natural soils on site can be treated as uncontaminated in the context of the continued industrial use.

## 12.0 STATEMENT OF SITE CONDITIONS

The site's location is not one of high environmental sensitivity. Elevated contamination in the onsite soils was not found and as a result contamination of any groundwater encountered in the future is not anticipated.

The intended future use of the site at this time is to continue as an operational galvanising facility. With this in mind, the concentrations on site do not pose a threat to the health of on-site workers.

The findings outlined in this Site Report define the baseline of the environmental status of the site. However, the possibility of significant variation in ground conditions existing between sampling locations cannot be discounted and groundwater conditions are based on observations made at the time of the investigation which may be subject to significant variation due to seasonal or other effects.

Three permanent monitoring wells were installed around the site to enable future monitoring of the site conditions via the collection of groundwater (if encountered) and / or ground gas.

**Introduction**

The Environment Act 1995 has made site sensitivity a key issue, as the legislation pays as much attention to the pathways by which contamination could spread, and to the vulnerable targets of contamination, as it does the potential sources of contamination. For this reason, Landmark's Site Sensitivity Datasheet places great emphasis on statutory data provided by the Environment Agency and the Scottish Environment Protection Agency; it also incorporates data from English Nature (and the Scottish and Welsh equivalents), the Environment Agency (and the Scottish equivalent) and Local Authorities; and highlights hydrogeological features required by environmental and geotechnical consultants. It does not include any information concerning past uses of land. The datasheet is produced by querying the legend database to 1km from a single point or a site boundary provided by the client

In the attached datasheet the National Grid References (NGRs) are rounded to the nearest 10m in accordance with Landmark's agreements with a number of Data Suppliers

**BOREHOLE RECORDS ORDER FORM**

Please note this order form is only to be used for the supply of borehole records from the National Geological Records Centre (NGRC) identified from Landmark Reports

Name:-  
 Address:-

Company:-

Telephone Number:-

Fax Number:-

Date:-

With respect to the following boreholes I would like to: -

Enquire about the costs ☐ Purchase copies ☐ New Leaflet ☐

BGS Registration number:			
Quarter Sheet	Number	Suffix	Name

Note: More than 10 records can be ordered, but it is advisable to discuss your requirements first with NGRC staff

**Unit price £13(+VAT) per borehole.**

**Minimum charge £26(+VAT)**

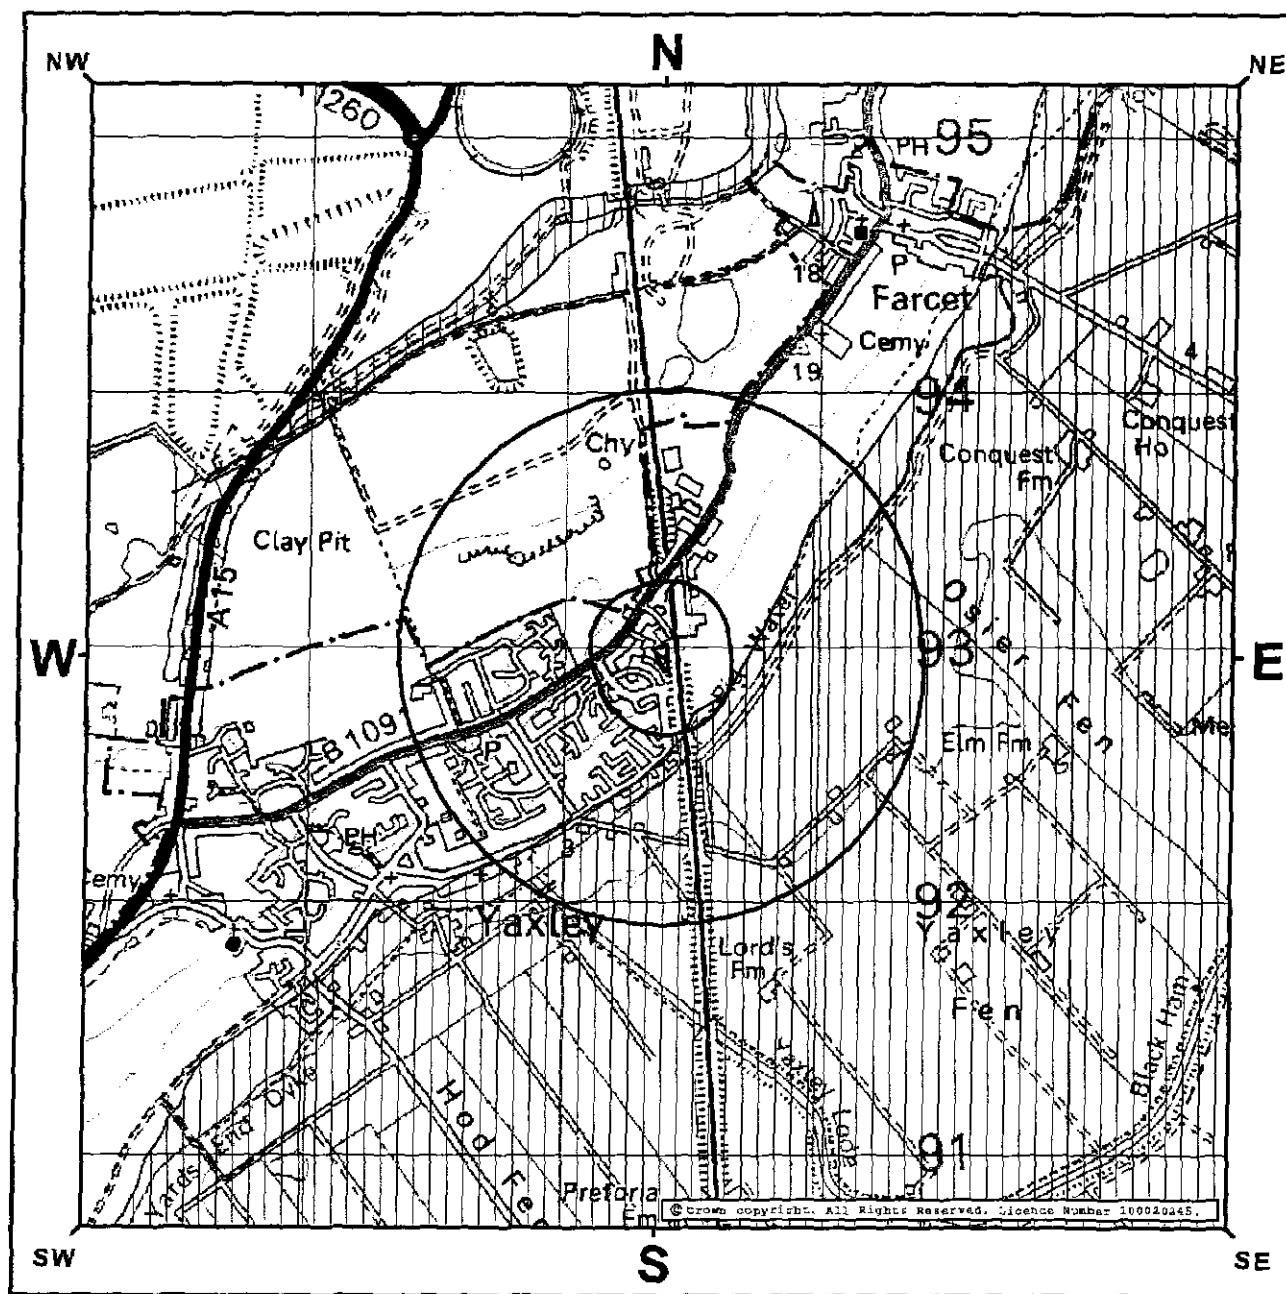

Method of delivery, please indicate preferred option.

1st class post ☐ Special delivery (guaranteed next day before 12:30pm.) ☐ Fax ☐

(Note 1st. class postage is included in the unit charge. Additional charges are made for fax or special delivery)

Please return this form to: - The Records Officer, National Geological Records Centre, British Geological Survey,  
 Keyworth, Nottingham, NG12 5GG.

Tel: 0115936 3109 Fax: 0115936 3276

#### Historical Map Legend

#### HUNTINGDONSHIRE

The historical maps shown were reproduced from maps predominantly held at the scale adopted for England, Wales and Scotland in the 1840's. In 1954 the 1:2,500 scale was adopted for mapping urban areas and by 1886 it covered the whole of what were considered to be the cultivated parts of Great Britain. The published date given on the right is often some years later than the surveyed date. Before 1938, all OS maps were based on the Cassini Projection, with independent surveys of a single county or group of counties, giving rise to significant inaccuracies in outlying areas.

#### Historical Map Legend

#### HUNTINGDONSHIRE

The historical maps shown were reproduced from maps predominantly held at the scale adopted for England, Wales and Scotland in the 1840's. In 1854 the 1:2,500 scale was adopted for mapping urban areas; these maps were used to update the 1:10,000 maps. The published date given on the right therefore is often some years later than the surveyed date. Before 1938, all OS maps were based on the Cassini Projection, with independent surveys of a single county or group of counties, giving rise to significant inaccuracies in outlying areas.

In the late 1940's, a Provisional Edition was produced, which updated the 1:10,000 mapping from a number of sources. The maps appear unfinished - with all military camps and other strategic sites removed. These maps were initially overprinted with the National Grid. In 1970, the first 1:10,000 maps were produced using the Transverse Mercator Projection. The revision process continued until recently, with new editions appearing every 10 years or so for urban areas.

The published date given on the right therefore is often some years later than the surveyed date. Before 1938, all OS maps were based on the Cassini Projection, with independent surveys of a single county or group of counties, giving rise to significant inaccuracies in outlying areas.

In the late 1940's, a Provisional Edition was produced, which updated the 1:10,000 mapping from a number of sources. The maps appear unfinished - with all military camps and other strategic sites removed. These maps were initially converted to the National Grid. In 1970, the first 1:10,000 maps were produced using the Transverse Mercator Projection. The revision process continued until recently, with new editions appearing every 10 years or so for urban areas.

#### ORDNANCE SURVEY PLAN

The historical maps shown were reproduced from maps predominantly held at the scale adopted for England, Wales and Scotland in the 1940's. In 1954 the 1:25,000 scale was adopted for mapping urban areas; these maps were used to update the 1:10,000 maps. The published data given on the right therefore is often some years later than the surveyed date. Before 1938, all OS maps were based on the Cassini Projection, with independent surveys of a single county or group of counties, giving rise to significant inaccuracies in outlying areas.

In the late 1940's, a Provisional Edition was produced, which updated the 1:10,000 mapping from a number of sources. The maps appear unfinished - with all military camps and other strategic sites removed. These maps were initially overprinted with the National Grid. In 1970, the first 1:10,000 maps were produced using the Transverse Mercator Projection. The revision process continued until recently, with new editions appearing every 10 years or so for urban areas.

**ORDNANCE SURVEY PLAN**

The historical maps shown were reproduced from maps predominantly held at the scale adopted for England, Wales and Scotland in the 1840's. In 1854 the 1:2,500 scale was adopted for mapping urban areas and by 1886 it covered the whole of what was considered to be the cultivated parts of Great Britain. The published date given on the right is often some years later than the surveyed date. Before 1938, all OS maps were based on the Cassini Projection, with independent surveys of a single county or group of counties, giving rise to significant inaccuracies in outlying areas.
